

# Rockfon® Contour

Sounds Beautiful

EFFORTLESS ELEGANCE, UNLIMITED POSSIBILITIES.

## Rockfon Contour<sup>®</sup>

Unite form and function with our frameless acoustic baffles. Rockfon Contour effortlessly combines sleek, clean lines with acoustic excellence, creating an inviting atmosphere that enhances tranquility and boosts productivity. Our elegantly crafted baffles offer swift and hassle-free installation, seamlessly blending into any design as standalone pieces or harmonizing with other acoustic products. With the option of flat or curved edges, along with a variety of shapes and sizes, Contour sets a new standard for aesthetics and versatility.

# Create harmony and comfort.

Rockfon Contour contributes to improving the overall well-being within a space. With Class A sound absorption, Contour plays a vital role in establishing a comfortable acoustic environment. By effectively absorbing sound, it reduces unwanted noise, creating a serene atmosphere where people can feel calm, focused, and content.

With its clean and sharp lines, Contour possesses precision and sophistication that can be added to any interior space. Contour's unique ability to mimic waves and shapes adds an element of artistry to ceiling designs, achieving a perfect balance between form and function. Available in different sizes and edges, you can create the design to fit your vision.

Rockfon Contour is ideal for spaces where traditional suspended ceilings pose technical limitations or don't meet aesthetic preference, such as skylights or tall windows. The Contour range is suitable for variety of spaces, from smaller rooms to open-plenum office buildings. And with the easy installation process you are sure to have an uncomplicated building process.

### Acoustics

Class A sound absorption.  
Independently tested in certified laboratories using an  $\alpha_w$  measurement in accordance with ISO116544.

### Dimensions

1200x150, 300x1200, 300x1800, 600x1200

### Design

- Design a statement ceiling by clean, sleek or curved lines in different dimensions.
- Use as a standalone solution or in combination with an existing acoustic ceiling.
- Ideal in rooms where traditional suspended ceilings aren't possible or aesthetically unappealing (e.g. where skylights or tall windows are installed).
- Quick and easy installation with our suspension system.
- Choose from 4 rectangular shapes and 3 modular wave shapes.
